## Back by Popular Demand

## IC-7200

### HF Plus 6 m

Shown with optional handles

The IC-7200 is a simple, tough rig for HF and 6 meters using the latest IF DSP technology. Even though this is an entry-class transceiver, its advanced digital features are comparable to higher class rigs. Distortion and blocking from strong nearby signals are prevented by placing DSP functions inside the AGC loop. The built-in digital filter eliminates the need for optional CW and SSB filters. Features digital twin PBT, manual notch filter, digital noise reduction, and digital noise blander. The direct digital synthesizer (DDS) creates a clear, clean transmit signal.

Other features include: USB port for PC control, RF speech compressor, full break-in for CW, selectable CW carrier point, adjustable CW pitch, RIT, VOX, backlight LCD display, CI-V interface, 201 memory channels, preamplifier, band stacking register, built-in voice synthesizer and built-in 20 dB attenuator.

## The Pinnacle of HF Perfection

### HF Plus 6m IC-7851

The IC-7851 perfects HF operation with new features such as a 1.2 kHz optimized roofing filter to improve in-band adjacent signal performance. The new design outperforms competitors' similar models in the 2 to 10 kHz separation tests.

Unlike HF rigs using a conventional voltage controlled oscillator for the 1st LO, the IC-7851 uses a direct digital synthesizer (DDS) with a voltage controlled SAW oscillator (VCSO). This new 1st

LO design sets a benchmark for phase noise with -150 dBc / Hz at 10 kHz offset (and -140 dBc / Hz at 1 kHz offset).

The IC-7851 also has the spectrum waterfall function found in the IC-7700. The high-resolution waterfall screen shows the changing amplitude of frequencies over time. An enhanced spectrum scope promotes fast and accurate scan and can be operated with PC mouse via USB port. Dual scope function shows simultaneous activity in both bands to help search a sub-band while maintaining a run frequency on the main band.

### All-Band HF IC-718

- Receives 0.03 ~ 29.995 MHz.
- 101 memory channels.
- Modes USB, LSB, CW, RTTY, AM.

### RS-BA1 IP Remote Control for HF Transceivers

Remotely control Icom transceivers through an IP network with the RS-BA1. The RS-BA1 allows you to use the radio installed in another room using your home network or a remote location over the Internet. The low voice latency caused by the RS-BA1 provides the same operational experience as using an actual radio. Most functions and modes of your transceiver can be controlled.

The RS-BA1 has two component applications: System Configuration to set up the IP address and other settings, and Remote Control allows you to control the radio. The display on the RS-BA1 is similar to the radio's front panel. Supports the IC-7100, 7200, 7410, 7300, 7600, or 9100 with USB connection to a PC. Also the IC7800 or 7700 connected to a PC with an RS-232C cable plus S/P DIF or ACC cable.

### Icom Cloning

Icom cloning software for Windows allows you to preprogram memory channels with operating frequencies, set tones, set power levels, set squelch levels, set up auto-dial DTMF frequencies, and exchange operating frequencies. Call for price quotes.

### AM / FM / Shortwave Radio

Field -BT receives almost every radio wavelength—AM(MW), FM, and Shortwave (SW)—at home or abroad. And it's easy to set the station spacing and frequency so your stations come in loud and clear wherever you are.

- High sensitivity, strong anti-interference, low background noise, and even lower distortion.
- Wide/narrow bandwidth selection improves audio fidelity and minimizes noise. Listen out loud or plug in your favorite headphones.
- The Radio Data System (RDS) enables FM broadcasters to deliver more than just an analog

audio signal, but also to transmit digital data, like the station's call letters, style of music, song title, artist and more.

- Local and world time settings, radio and buzzer alarm clock settings, sleep timer and snooze light
- Use 4 D batteries (not included) or plug in the supplied AC adapter into the DC jack.

**FRX5-BT**  
**All-Purpose, Quad-Power, Shortwave Radio**

**\$79.95** – HRO Price

Need an SWL radio that's rugged, rechargeable, and reliable, not to mention solar-powered, splashproof and smartphone & tablet charging? The FRX5-BT is just the ticket. With a rechargeable lithium battery, super-duper solar panel and hand crank power generator, it's an essential tool for use at home or away.

Stay up to date with this AM / FM / SW digital radio with display and alarm clock. There's an AUX-input to play your own tunes. And, when you want to listen alone, just plug in your favorite headphones.

The FRX5-BT powers up in four ways—via solar panel, hand crank, built-in rechargeable lithium battery, or alkaline batteries. The solar panel will charge the battery fully in 5-6 hours. Crank the hand turbine for four minutes and you'll produce enough power for 10-15 minutes of music and weather or one minute of talk time. Use the micro-USB cable to charge the built-in rechargeable battery. To charge your smartphone or tablet, plug it into the 5V 2.1A USB port. Power will automatically "dump charge" to your device, just like plugging into the wall. The FRX5-BT will fully charge most smartphones once.

Shine the bright LED flashlight to find your way. Use the glow-in-the-dark locator and illuminated buttons at night. And for big-time emergencies, flash the red emergency beacon.

## Log Periodic

CLP5130-1

The CLP5130 antennas are high gain, wide band VHF/UHF log periodic beams for horizontally polarized base station use. Covers amateur bands from 50–1300 MHz, FM broadcasting, scanning, VHF / UHF TV, air band communications, government and business bands.

Forward gain is 10 to 12 dB – 10 to 16 times the gain of a nondirectional discone type antenna. The VSWR is less than 2.0:1 across the band. The high-quality aluminum antennas have a boom design that allows movement of the phasing line. Distortions in the vertical and horizontal planes are minimized and element adjustment is not necessary. The boom-to-mast bracket is made of a lightweight and rugged magnesium alloy.

# RADIO REMOTE CONTROL

## REMOTERIG

*The Ultimate in Remote Control*

**Remoterig  
RRC-1258-MkII-S-Set**  
\$489.95 – HRO Price for the Set

The Remoterig RRC-1258-MkII-S-Set was developed to control Amateur Radio stations remotely via the Internet in a user friendly and cost-effective manner.

Remoterig units are used in pairs; one unit is connected to the radio, and the other to the control equipment. The system is unique in that no PC is needed; both voice and data communications are handled by the two units.

The RRC-1258-MkII-S-Set can be configured to work with almost all ham equipment currently available from Icom, Kenwood, Yaesu, and Elecraft. Remoterigs are especially useful in situations where you are (1) not allowed to install antennas at your home location, (2) the noise level is so high that a normal signal exchange is not discernible, (3) you want to build an antenna system too large for your local urban area, or (4) you do not want to be dependent upon a PC for the remote control.

The ultimate functionality of the Remoterig RRC-1258-MkII-S-Set can be experienced when the system is used with radios having detachable front panels such as the Kenwood TS-480, TS-2000, or Icom IC-706 series. Simply replace the cable between the control panel and the radio with the Remoterig system. The Yaesu Twin version and Electric K3 Twin versions are available.

The system also works very well with more traditional remote control situations from PC-based control software, like Ham Radio Deluxe; the Remoterig boxes solve the voice and data problems, but you do need a PC for the control software itself in this particular setup.

*Now with Dual (Stereo)  
Receiver  
and  
Includes 12 V  
Power Supply*

The Remoterig system itself will not introduce any latencies, and those introduced by the Internet will rarely be a noticeable problem. The Remoterig system also includes a unique solution for operating CW over the Internet with, among other things, a built-in CW keyer that uses a standard 3.5 mm stereo plug.

The Remoterig RRC-1258-MkII-S-Set is connected to the Internet primarily via 10 or 100 Mbit Ethernet cable, and fixed connections like DSL, cable, or WLAN. 3G based mobile solutions will also work, although occasionally with reduced performance. The system is portable and can be used from almost any network connection in the world. Session initiation, audio (VoIP), and data are transferred using standardized protocols like SIP, RTP, etc., where you can select different audio qualities depending on available bandwidth. The Remoterig system is easily configured via modern USB and WEB based user interfaces. Stereo (dual receiver) works only with radios with dual receivers.

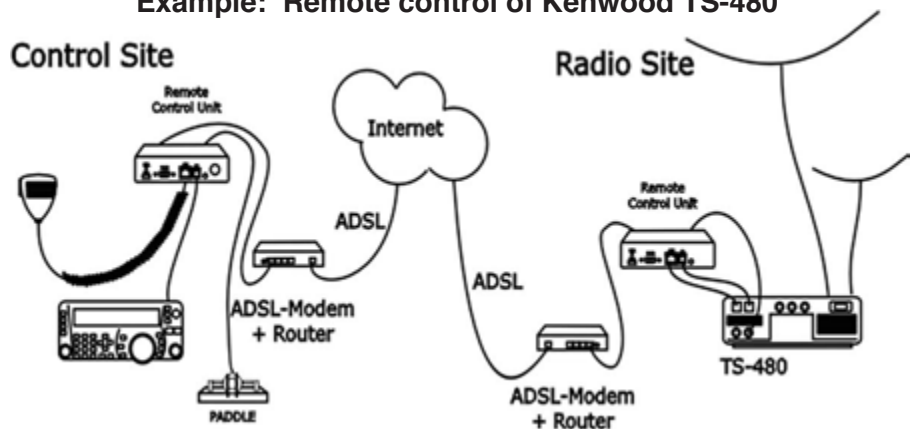

**An example of  
CW with remote  
controlled Radio**  
**CW Keyer**

A CW keyer has been implemented in the RRC-1285S-MkII-S-Set software to make CW operation possible, even with longer Internet latencies and jitter. During normal operation we depend on the radio's sidetone for CW, so the problem of Internet latency is solved by the sidetone being generated locally in the Remoterig box. Remoterig automatically mutes the sidetone generated by the radio for x number of ms after the dot or dash is sent; the delay can be adjusted depending on the latency.

The CW-handler is a kind of adjustable "jitterbuffer" for the CW keyer at the radio end. If the latency of your Internet connection is not constant, the delay (in ms) can be set before the radio is keyed. The CW keyer reconstructs the transmission on the fly before it is sent; a system that is much more tolerant of varying latencies (jitter). Lengthier delay settings may provide higher tolerance against jitter, but will also effectively delay the transmitted CW signal.

### Example: Remote control of Kenwood TS-480

As an example, the diagram shows a TS-480 in use with the RRC-1258-MkII-S-Set. Any of the available radios with detachable front panels, like the IC-706, and TS-2000, will be configured in the same manner. The cable between the front panel and the radio is replaced with two RRC-1258-MkII-S-Set; one connected to

the control panel, and one connected to the radio itself. No PC is necessary in this case.

When the power button is pressed, the radio on the remote side will start up, and all audio and information from the panel travels via the Internet between the pair of RRC-1258-MkII-S-Set units – a very

similar situation to SIP-based IP telephones. All appearances and functions will be as if the front panel and radio were directly connected. Presently, the TS-480 is the simplest to adapt using one additional cable (optional Kenwood E30-3500-05). Connection cables can also be made using the RJ-45 and RJ-11 connections.

Front panel controls set both RX audio levels, TX audio output level, audio monitor level, and the CW speed. **HRO Price \$374.95**

## Multimode Data Controller

### PK232SC

#### Multimode Data Controller

HRO Price 599.95

With the addition to the PX-232 of a built-in sound card, rig control, computer isolation, and total USB connectivity, the PK-232SC brings a new level of performance with sharp, accurate DSP filters for all its internal data modes and dual transformer isolation for sound card data modes. Weak signals magically appear from the noise and QRM bounces off the new DSP filters for cleaner copy with fewer errors than the old analog filters.

#### More Filters, Better Filters, Automatic Selection

The PK-232SC brickwall filters have tighter bandwidth and steeper skirts for improved noise and QRM rejection. New firmware (version 7.2) allows a wider selection of filters than the original PK-232, so the filter can match the mode. The correct DSP filter is automatically selected when you choose an internal mode. In RTTY, Timewave's proven twin peak filters pluck the mark and space tones from the noise and QRM for great copy. In PACTOR, the filter bandwidth automatically changes when the baud rate shifts in response to the error rate of the link. In Morse (CW), the operator can preset either 100 Hz or 200 Hz bandwidth. The PK-232SC is compatible with all Windows XP, Vista, and Windows 7 software terminal programs for the PK-232.

#### Sound Card Interface and Rig Control

For maximum flexibility, Sound Card / TNC switching is both software and panel switch controlled; sound card mode selection is software controlled. For example, when operating with Radio Operating Center software, changing to PSK31 from Pactor or MT63 is a simple menu click. The single USB cable from your PC also moves your logic level Kenwood RX / TX / RTS / CTS, Yaesu CAT, and Icom CIV and USB rig control interface to the back panel of your PK-232SC.

#### All the Proven Modes + All Sound Card Modes

PK-232SC supports all new sound card modes in addition to all of the existing PK-232 modes: Pactor, VHF/HF packet, AMTOR/SITOR, Baudot, ASCII, Morse, HF Weather FAX, TDM, and NAVTEX.

The PK-232 / PSK comes with a complete cable and connector set in addition to Timewave's on-line and telephone support. As always, you can upgrade any PK-232 ever built to the latest PK-232SC!

- Digital signal processor.
- 18 DSP filters.
- Twin peak RTTY filters; adaptive PACTOR filters.
- Works with all sound card modes.
- USB sound card audio.
- Rig control for Icom, Yaesu, and Kenwood transceivers.
- Single USB computer connection.
- Galvanic computer isolation.

## Digital Processor

### DSP-599zx

#### All Mode Noise Filter / RTTY Modem

This powerful noise and QRM filter surpasses the newest "DSP" radios with its flexible features. Continuous filter tuning up to 5 kHz opens up wider bandwidth modes like shortwave, AM broadcast, and VHF / UHF FM. Heterodynes disappear, weak signals pop up from the noise, and the sharp filters slice away QRM.

The DSP RTTY modem (w/optional DSP-RTTY software) pulls out solid copy when you can barely hear a signal. Filter settings are easy-to-read on the backlit alphanumeric LCD display. Pushbuttons select noise reduction, memories, voice, CW, and data modes. Optical encoders tune the filters.

- Hyperspeed DSP - 27 ns, 36.8 MIPS.
- 2 selectable channels with multiple memories.
- Front panel programmable input sensitivity and line output level.
- AC line noise AM filter.
- Calibrated audio volt meter & generator.
- 13 preset data filters plus two user presets.

**DSP-599zx HRO Price \$399.95; AC-8 P.S. \$24.95**

## Noise Canceler

### ANC-4

The ANC-4 RF device eliminates or reduces power line noise, computer noise, TV generated interference, and other types of electrical noise. Attach the unit directly to the antenna connector of the receiver or transceiver to cancel locally generated noise before it affects the receiver AGC circuits. Reception of signals well below the noise level of the local interference is possible.

To cancel locally generated interference, the ANC-4 detects the interfering signal and adjusts its phase and magnitude so that it matches the offending interference at the receiver input, but is 180 degrees out of phase. Front panel controls allow adjustment of both phase and magnitude.

Connect the ANC-4 between the main station antenna and the receiver antenna connector. A second antenna connects to the ANC-4 to pick up noise. A short wire antenna or short collapsible whip is generally satisfactory for eliminating noises generated around the operating position or in the house, but an external antenna works better to eliminate noises generated outside the home. Any noise antenna that works, including combinations of horizontal and vertically polarized antennas, is satisfactory.

The ANC-4 operates as an active antenna by using the noise antenna and the NOISE GAIN control to amplify the antenna output. The unit can also be used as a diversity combiner to peak weak signals or null interfering signals. **HRO Price 189.95**

HRO Price \$CALL

This analyzer measures SWR (standing wave ratio), return loss, and cable loss of cable / antenna systems from 100 kHz to 230 MHz. Built-in ZOOM capability makes graphical measurements especially effective. Use the integrated time domain reflectometer mode to locate the precise location of a fault within the feedline system.

Use this analyzer to: Rapidly check-out an antenna; tune an antenna to resonance; compare characteristics of an antenna before and after a specific event (rain, hurricane, etc.); make coaxial stubs or measure their parameters; test cable for fault location, signal loss, and impedance; measure capacitance or inductance of reactive loads.

**AA-30**  
HRO Price \$CALL

RigExpert makes antenna analyzers designed for testing, checking, tuning or repairing antennas and antenna feedlines in various frequency ranges. Mainly, these are SWR (Standing Wave Ratio) and impedance measurement instruments (vector impedance analyzers). Easy-to use measurement

modes, as well as additional features such as memory storage and connection to a personal computer on some, make RigExpert analyzers attractive for professionals and hobbyists. The graphical display of various parameters over a wide frequency range is a key feature of these analyzers, which significantly reduces the time required to adjust an antenna.

\$CALL — HRO Price

Use this linear amp to operate on HF (160–15 meters) and 6 meters. It has automatic band switching with the FT-1000D, FT-1000MP, FT-920, FT-990, FT-991, FTdx1200, FTdx3000, and the FTdx-5000 HF radios. The amp has 8 MRF150 power MOSFet transistors designed into 4 units of 2 transistors in a push-pull circuit at 48 VDC. The separate power supply, the VP-1000, allows easy installation. There are two input voltages, 117 VAC or 220 VAC.

Output power is a function of the power supply voltages. At 220 VAC there is 1000 Watts out on HF and 500 Watts on 6 meters. At 117 VAC the output is reduced to 500 Watts on HF. The Quadra has a built-in high speed tuner to match the amp to your antennas. It has four antenna outputs and two inputs. The multifunction omni-glow LCD display shows the status of the amplifier. There is automatic system monitoring with VSWR protection.

## Switching Supplies

Daiwa switching power supplies are one-third the weight and one-half the size of conventional supplies. Daiwa models can be used for DC motors that

require peak starting currents and will accept input voltage from 90-130 V. Switching supplies can create pulse noise, but Daiwa engineers have isolated any noise and moved it out of the amateur bands creating a super quiet power supply.

Both models below have adjustable voltage 5-15 V., a built-in automatic cooling fan, a carry handle for portability, and are short-circuit protected.

**Battery Analyzer**

The CBA is much more than a simple battery voltage tester or a battery load tester. The CBA will test virtually any type or size of battery, any chemistry, any number of cells up to 55 volts. For the first time and for a reasonable price, anyone can do scientific tests of their batteries by letting their computer do all the work. The CBA is capable of higher test rates than other testers: up to 40 amps or 150 Watts, whichever is higher. It not only tests the total amount of energy stored in a battery (capacity in amp-hrs), but it graphically displays and charts voltage versus amphotours. #58250-1014 HRO Price \$149.95

#### W2AU Series Baluns

W2AU is a transformer style balun using a solid ferrite core that operates at a low VSWR from 1.8 to 40 MHz, and handles powers up to 2 KW PEP (at SWRs of less than 3:1).

Hand built in rugged weatherized packaging, using US stainless steel hardware, and built-in lightning arrestor.

The 1:1 matches 50(75) ohms unbalanced coax to 50(75) balanced dipoles. The 4:1 matches 50(75) ohm unbalanced coax to 200(300) ohm folded dipoles. These also come in Beam and Ladder Line versions.

Our INLINE baluns include line isolation along the coax transmission system and great to use on Quad and Yagi antennas.

Our CURRENT type balun uses ferrite sleeve to choke RF current on the cable shield preventing harmonic radiation.

Unadilla's W2AU 1:1 baluns handle 2000 Watts and match 50-75 ohms coax to 50-75 ohms balanced. It has 1 to 1 impedance ratio and covers 1.8 to 40 MHz. Beam versions are available with pigtails to connect to driven elements.

W2AU 1:1 INLINE (dual SO239)	\$31.95

#### W2DU HF

W2DU Maxi-Baluns have extremely high power capability because they contain no ferrite cores to saturate. Even at high SWR levels, the W2DU baluns won't generate harmonic radiation. The internal feed line passes through ferrite beads which prevent RF current from flowing on the coax shield. Also available for VHF. **HRO Price \$31.95**

Each whip is ruggedly constructed. Heavy duty 4-foot, 3/8" diameter fiberglass rods, nearly indestructible eighth-inch diameter PH-17-7 stainless steel whips, and chrome-plated brass fittings will give you years of service.

Sleek low-profile construction has low wind loading and the semi-rigid fiberglass eliminates the need for springs or guys. Black anti-static jacket protects the loading coil and blends with any vehicle. Stainless steel whips are adjustable for lowest SWR. Push the whips down to park in the garage or fully extend for maximum efficiency during mobile operation. Includes allen wrench and complete tuning and matching instructions.

## Titan DX

The Titan is a center fed GAP vertical, that provides a host of benefits in a rugged, yet manageable form. The Titan offers broad, continuous frequency coverage in a no tune, easy to assemble format. Designed to work in a limited space or as the perfect compliment to an antenna farm. NO RADIALS required.

Total continuous coverage under 2:1 on 10m, 12m, 15m, 17m, 20m, 30m, 40m, and 100 kHz on 80m.

## Challenger

The Challenger is capable of operating on eight separate bands from 3.5 MHz to 144 MHz. Use it on 80, 40, 20, 15, 12, 10, 6 and 2 meter bands with over 130 kHz bandwidth on 80 m.

The antenna is designed to be mounted directly in the ground or elevated. A ground mount is provided. The Challenger may be roof mounted. The antenna requires a counter poise of three 25 foot insulated wires.

## Eagle DX

The Eagle DX weighs just 11 pounds and can be installed almost anywhere. It is essentially a set of vertical dipoles with no traps, coils or transformers.

It covers 40, 20, 17, 15 and 10 meters with the entire band at a VSWR of 2:1 or less. For 10 m this is 500 kHz. No antenna tuner is required.

## Voyager DX

The Voyager DX is manufactured specifically to provide efficient low band operation from the typical backyard without a huge investment in time, money, or space.

It is not another "add a kit" antenna for 160m. GAP technology opens up the low bands. Emphasis was given to 160 m and 80 m when designing the Voyager.

The antenna employs a capacity hat with circular ring to reduce the physical height to 45 feet while maintaining an electrical height of 66 feet.

Parallel tuner rods are used in its design. No tuning or matching are required to put the Voyager on the air.

HRO Prices  
\$CALL

When properly installed on your vehicle the Little Tarheel II will provide continuous coverage from 3.5 to 54 MHz with the supplied whip. Like all of our motorized antennas, this model meets the highest standards but in a smaller size.

It comes with sensors pre-installed so if you decide to add one of the auto controllers (SDC-100 Simple Controller, SDC-102 Programmable Controller, Turbo Tuner, and Tunematic) now or later, everything is ready.

This antenna is for the person who wants to enjoy HF mobile with a more compact antenna. Don't let the small size fool you. The Little Tarheel II mounts higher on the vehicle so you have less ground loss and higher performance. Because of its smaller size, this antenna offers the convenience of a more common type of mount like the Diamond K400 Series, the Comet Series, or similar 3/8" stud type mount.

The Little Tarheel II comes as a package. All you need is a mount and a nice HF radio. Included standard with the antenna is: the whip, 20 feet of plug and play control cable, manual control box, ferrite decoupling core and 3/8 x 24 stud.

The antenna is powder coated in standard colors of black, white, red or silver. It also comes with the tough Lexan™ Weather Shield like its big brothers. This model also uses the commercial 12 volt gear motor.

The antenna has a ONE YEAR NO MATTER WHAT WARRANTY to the original owner.

#### Specifications:

- Lower mast size: 1 1/2". Weight: 1.9 lbs.
- Lower mast length: 16".

## Portable HF Antenna

**CHA  
EMCOMM II**

**HRO Price \$114.95**

This antenna for backup emergency HF system or permanent installation has an integral broadband impedance matching network (transformer 5:1) allowing broadband antenna tuning. It is the perfect backup antenna for apartments, condominiums, homeowners associations, deed restrictions, and CCRs (Covenants, Conditions and Restrictions), ARES, RACES, MARS, EMCOMM, NVIS, first responders, and especially for emergency preparedness.

The unit is totally waterproof. The antenna is 60' long and covers 6 m to 160 m. An external tuner is required. It weighs 1 pound and has an SO-239 RF connection.

The antenna will perform very well as a sloper or an inverted "V" configuration. For a NVIS configuration (40 m – 80 m) the antenna must be installed horizontally with the ground and elevated between 9' and 12' high. It does not require any ground-plane but will perform better with one. A ground terminal is available for that purpose.

## Wireless Antennas

**Wi-Fi / 802.11b**

## Wireless LAN Antennas

NGC offers a wide selection of directional and omnidirectional antennas for Amateur Television, the ISM band, LAN / WAN, data links and wireless internet.

### GP-24R

ATV/ISM band: 2400-2500 MHz.

**HRO Price: \$149.95**

### GP-24-3R

Same as GP-24 but omnidirectional with 3 degree electrical downtilt.

**HRO Price: \$159.95**

## HF Dipole Antenna

**YA-30**

This 83-foot broadband dipole provides optimum performance over 1.8-30 MHz. Usual requirements for an antenna tuner between the rig and antenna are eliminated by the unique broadband design. Handles 150 Watts at an SWR of less than 1.9:1 on the amateur bands. Pre-assembled and pretuned. Can be installed as a horizontal flat-top, inverted-V, or sloper. 100 feet of RG-8X with PL-259 included. **HRO Price CALL**

## HF / VHF / UHF Mobile Antenna

**ATAS-120A >**

The ATAS-120A provides HF / VHF / UHF coverage with automatic motorized tuning. Control radiator length from the transceiver for best SWR. Compatible with Yaesu's FT-100, FT-847, FT-857, and FT-897. **HRO Price CALL**

## HF / VHF / UHF Portable Field Antenna

**ATAS-25**

The ATAS-25 has radiating elements covering amateur bands 10-40 m, 6 m, 2 m, and 70 cm. Mounts to a standard camera tripod (not included). Uses a manual tuning system. Dual frequency operation possible with a duplexer (not included). Antenna collapses to less than two feet to carry; expands to 7.2 foot maximum height. This is an ideal system to use with the FT-817, FT-897, and FT-857 transceivers. Weight is 2.05 pounds. **HRO Price CALL**

In addition to the popular Motorola 3/4" (NMO) mounts shown here, mobile antennas for the Larsen mount (LM) and PO mount (PO) are excellent choices for amateur use. Each of these mounts comes in one of the thread types.

Mounts:

NMO K premium quality rooftop.

NMO MMR mag mount, 80# pull strength.

NMO TLP heavy duty trunk lid.

NMO TMB electropolished trunk gutter bracket.

NMO HF for low or high frequencies (pull center pin and insulator for high frequencies).

NMO HFTHK NMO thick mount (surfaces to 1/2" thick) high or low frequencies.

### Select an Antenna

Once the base and thread type are selected, the final step is to choose the antenna.

All Larsen mobile antennas meet the industry's most demanding specs for electrical efficiency and mechanical durability.

Gain antennas are made of a coil and a whip. Quarter wave antennas are just a whip.

- Colors: Black coil base; chrome or all black whip.

### Dual- & Tri-band VHF / UHF

Comet developed the Super Linear Converter (SLC) to increase actual gain of dual and triband antennas.

- A complete pre-formed phasing coil and phosphorus copper element eliminate additional components and gain loss.
- The SLC is electrically very efficient, providing a low angle of radiation, directly to the horizon.
- Comet sectional antennas use ABS (Transparent to RF) connecting joints for the finest pattern and easiest assembly.

# CRANK-UP TUBULAR

## MA-Series Crank-Up Masts

The premier MA-series crank-up Tubular Towers are designed to be both safe and neighbor friendly. The slender design gives a clean, flagpole-like appearance and is rated at 90 mph winds per the IBC 2006 code. Per TIA/EIA specifications, adequate safety margins are included. International Building Code calculations are available for most models.

The MA-40 and 550 models require base kits comprised of a flat base and two ½" x 10" anchor bolts, but come standard with a wall bracket and rotator plate mounted on top of the top section.

No guying is required when tower is properly bracked to the eave of your roof.

MA-series towers are completely self-supporting only when used with accessory MARB or MAB series bases. The MARB series rotator base allows the entire tower and antenna to be rotated from the base (rotator not included). This provides for easy rotator maintenance plus emergency hand rotation of the entire tower and antenna.

The MA-550MDP, 770MDP and 850MDP models include a heavy duty motor drive with positive pull down. The MDP models provide motorized raising and lowering of the tower. A remote control unit (RMC-1000) accessory is available that allows raising and lowering from your ham shack or other remote location.

All models without motor drives come standard with

manual hand winches which have load actuated brakes for maximum safety. This feature prevents the winch from free-wheeling and causing injury to you or your installation in the event that you lose your grip during raising or lowering.

All steel used at US Tower conforms to ASTM specifications. All welding is done by certified factory personnel. All of our towers are factory tested by trained personnel before leaving the plant.

### MA-Series Base Information

Foundations are designed in accordance with the International Building Code (IBC) for a "non constrained" condition using Class 5 soil. Alternate or custom foundation designs are available for an extra charge. Anchor rods may be ordered from US Tower; however, reinforcing steel is not provided. Welder's certified IAW AWS D1.1. Contact US Tower for additional information.

Rebar is not provided by US Tower. MA-40 & 550 use their flat bases as a template. These flat bases use only 2 bolts. Wooden template included with MAB & MARB bases.

Because of wide variations throughout the country in zoning requirements and loading conditions (snow, wind, ice, etc.), it is the responsibility of the customer to make certain that his Tower conforms to all applicable codes. We recommend you obtain all necessary permits prior to purchase.

## TMM SERIES

US Tower's latest design includes the compact TMM series towers giving Hams in restricted areas an alternative.

The TMM series has a minimum retracted height of 11'4" (may vary, depending on rotator used) and a maximum height of 47' including mast. At the tower's retracted height, visual impact is reduced to a minimum and antenna servicing is made easier. Typically the tower and antenna are below the roof line of your home when the tower is fully retracted.

The TMM series towers are lightweight, freestanding crank-up towers that allow up to 20.7 square feet of antenna in 90 mph winds per TIA/EIA specifications. The TMM-433HD allows 31.8 square feet in 90 mph winds. These lightweight towers should provide many years of trouble free service. All of our towers have a hot dipped galvanized finish inside and out.

The TMM-433SS and 541SS have a 10" top section which will permit the installation of the Yaesu G800 and G1000 rotators inside the top section. Oversized rotators will prevent

full retraction of your tower; however, they may be used if full retraction is not required. This restriction is dependent upon location of rotator plate. All TMM Series towers require base kits comprised of a hinged T-base and anchor bolts, but include load actuated winch, rotator plate, and eight feet of 2" OD x .120" antenna mast.

The TMM-433SS, -433HD and -541SS will accept the MD-75 or MDP-750 motor drive accessories. The MDP-750 motor drive accessory is compatible with both of our MCL-100 and RMC-1000 limit switch packages (see accessories).

## TX SERIES

US Tower's freestanding TX series crank-up towers are as strong or stronger than most competitors' heavy-duty models. The TX series towers have 21 foot sections with 4 foot overlap to provide extra height and strength. In addition, the overlap helps prevent binding while lowering your tower in high wind conditions.

The TX series towers have a large enough top section (12 1/2") to permit installation of most rotators inside the section for maximum strength while allowing the section to fully retract. Cross bracing at critical points on the tower ensures safety and additional strength. All US Tower crank-up towers have a heavy-

duty, hot dipped galvanized finish both inside and out, which should provide many years of trouble free service.

The TX series towers come complete with rotator plate and Fulton hand winch, except MDP and MDPL models, which feature automatic load actuated brakes for maximum safety. Base kits are required, consisting of large steel anchor bolts and heavy-duty steel T-base that allows the tower to hinge on for easy installation. All T-bases will accept the TRX series raising fixtures for easy one-man installation. Other accessories include masts and motor drives (see accessory page).

The TX-472MDP comes complete with MDP-750 motor drive with positive pull-down feature. The TX-489MDPL includes the MDPL-1000 motor drive and level wind feature. A limit switch assembly (MCL-100), or a remote raising device (RMC-1000) is required for all 72' and under towers that will be paired with either the MDP-750 or MDPL-1000 motor drive units (see accessory page for description).

US Tower's TX series requires no guying. The wind loading is calculated at 90 mph winds per TIA/EIA specifications. To assist you in applying for necessary construction permits, IBC 2006 calculations are available for most models.

## HDX SERIES

US Tower's HDX series heavy-duty crank-up towers have up to 2 1/2 times more windload capacity than others commonly advertised. This superior strength allows for large stacked arrays, while using our commercial type bases and anchor bolts that can be easily installed and vertically adjusted. All HDX series T-bases are designed to use our TRX series raising fixtures to make installations and antenna servicing a one man job.

US Tower carries as accessories many different sizes and strengths of masts which

can be used with the HDX series towers. The HDX-572MDPL and 589MDPL motorized towers provide dual level wind, positive pull down and heavy duty gear box features. The HDX-589MDPL comes complete with the MCL-100 limit switch package included. All towers using MDP-750 and MDPL-1000 motor drives must use either the RMC-1000 accessory limit switch package or the MCL-100 (see accessory page), which allows the raising and lowering of your tower from the comfort of your ham shack or any remote location.

All HDX series towers come complete with rotator plate, but require base kits consisting of anchor bolts and heavy-duty T-base. US Tower's special T-base design allows the tower to hinge for easy installation. US Tower's crank towers require no guying. The HDX Series towers are rated at 90 mph winds per TIA/EIA specifications. To assist you in getting a construction permit, IBC 2006 calculations are available for most towers.

TRX-80HD	Heavy-duty model tower raising fixture for TX and HDX series towers.	155#
TRX-100HD	Heavy-duty model tower raising fixture for TX and HDX series towers.	220#

The TRX-80, 80HD, and 100HD are designed to be easily mounted on your tower's hinged T-base for quick and safe one-man installation or antenna servicing.

## Remote Control

Model	Description	Weight
RMC-1000	Relay operated remote control for raising and lowering your tower from your ham shack or other remote location. The RMC-1000 includes limit switches, limit switch brackets, and two relay boxes. The RMC-1000 can only be used with the MDP-750 and MDPL-1000 motor drives.	18#
MCL-100	Limit switch control package. The MCL-100 includes limit switches, limit switch brackets and control box at the base of the tower. The MCL-100 allows you to raise and lower your tower with automatic shut down when maximum or minimum height is reached. The MCL-100 can only be used with the MDP-750 and MDLP-1000 motor drives.	7#

*These items can only be installed by the factory at the time of your tower order. These items cannot be installed in the field and must be a part of your complete tower order.*

## Motor Drives

Model	Description	Weight
MD-75	Heavy-duty motor drive with 1 HP motor and 1 gear box.	55#
MDP-750	Heavy-duty motor drive with 1 HP motor, gear box and positive pull down. US Tower's positive pull down feature is designed to mechanically apply the same strength in the retraction process as is used in the raising of your tower. Positive pull down is very important in lowering your tower in high wind conditions. The MDP-750 differs from the standard motor drive unit (MD-75) which releases tension on the cables allowing the weight of the upper sections to be the only lowering force.	185#
MDPL-1000	Heavy-duty motor drive with 1 HP motor, heavy-duty gear box, positive pull down and dual level wind features. Dual level wind is an exclusive US Tower design allowing the cable to wind on the motor drum in a uniform manner. This prevents the cable from overlapping on the drum.	220#
